

# Farmer Corn & Soybean Plots

**B**eck's Hybrids is committed to helping you take advantage of product testing by offering you whole field and multiple plot yield information so that you can make informed decisions about next year's crop. The field checks and test plots that you see on the following pages are from all across our marketing area. After reviewing this information, call your local dealer, district sales manager or our office to discuss any of the plots or other test results.

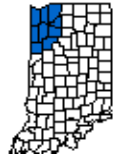

Lee R. Rulon, Marketing Director

We certainly appreciate the help and information that many growers have provided to us. As you are aware even with this year's expanded book there is not sufficient space to include all cooperator data although all data was used in the comparisons shown earlier in this book. We thank each and every one of you for your contribution.

All of us at Beck's Hybrids would like to express our gratitude for your trust and association. We thank you for the opportunity to be your seed suppliers in 2005.

WEIGHED BY: Jon Schriener

“Last year was a tough year to get corn up and out of the ground. I didn’t get a real good stand with 5166 because it wasn’t treated with FaStart. This year started out pretty rough too but the performance of 5166, now with FaStart as a standard feature, was just outstanding. 215 Bu./A. at 22% moisture, harvested the 29<sup>th</sup> of September. That’s performance! I am convinced that FaStart made the difference.”
