WEIGHED BY: Adams County Extension Agent

“We were interested in planting Beck’s Hybrids Vistive Soybeans because of the provisions offered by Cargill in Lafayette, IN. BECK 326RRL Vistive soybean data looked as strong as their BECK 323RR, which has been a great bean for us. The Vistive soybeans had fantastic emergence. They were our first beans up – they just leaped out of the ground. They were a nice looking, good sized bean – both at planting and at harvest.”

WEIGHED BY: Thomas Kendle

"I am very happy with my Beck beans. A 58 acre field of BECK 297NRR got hit with hail on September 22nd and had 18.2% damage. We harvested the field on October 6th and it averaged 52 bushels per acre. With the hail damage figured in, that's 60 bushel beans. This kind of performance is what puts money into my bottom line. These BECK 297NRR soybeans were easy to harvest and this is one of the best bean yields I've ever had. I've already ordered more for next year."

WEIGHED BY: Beck's Hybrids-Rick Mears

"We planted Beck's Sure Gro treated soybeans in the same field with a competitive variety, the next day we had a 3" rain on this field. After the soybeans emerged we checked the population and the Beck's soybeans were averaging 50,000 more plants per acre than the competitor. The Beck's soybeans out yielded the competitor's variety. We will plant more acres to Beck's soybeans next year."
